Supplementary material

Supplementary Fig. 1. Generalized additive models of levels and rate of change of tau biomarkers: raw, Aβ40-normalized and total tau-normalized.

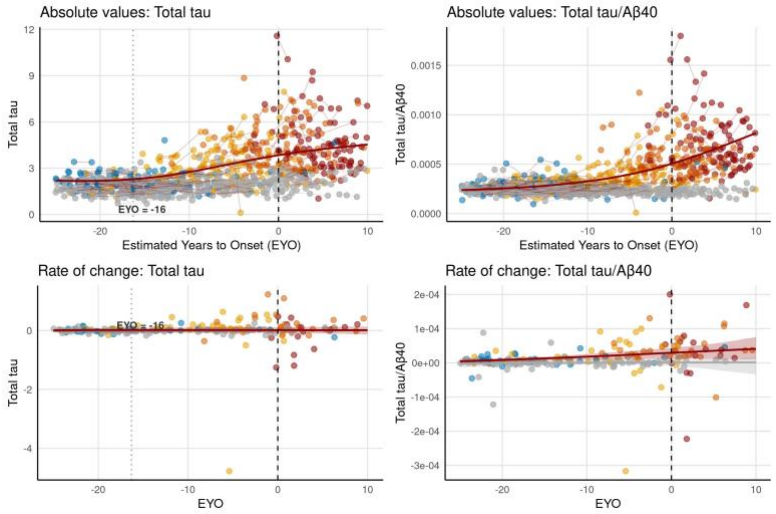

A) CSF p-tau217

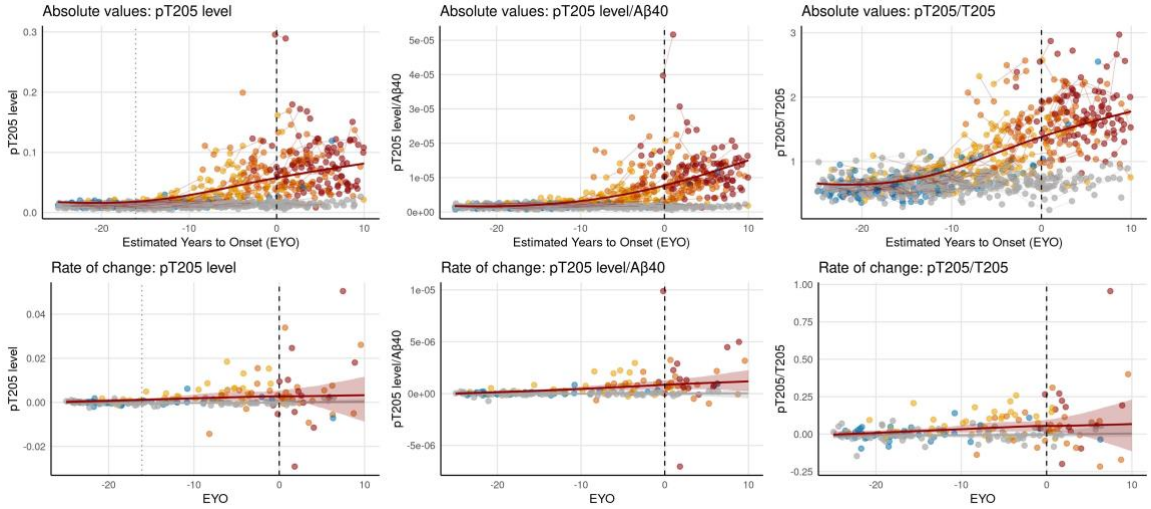

B) CSF p-tau181

C) CSF Total tau

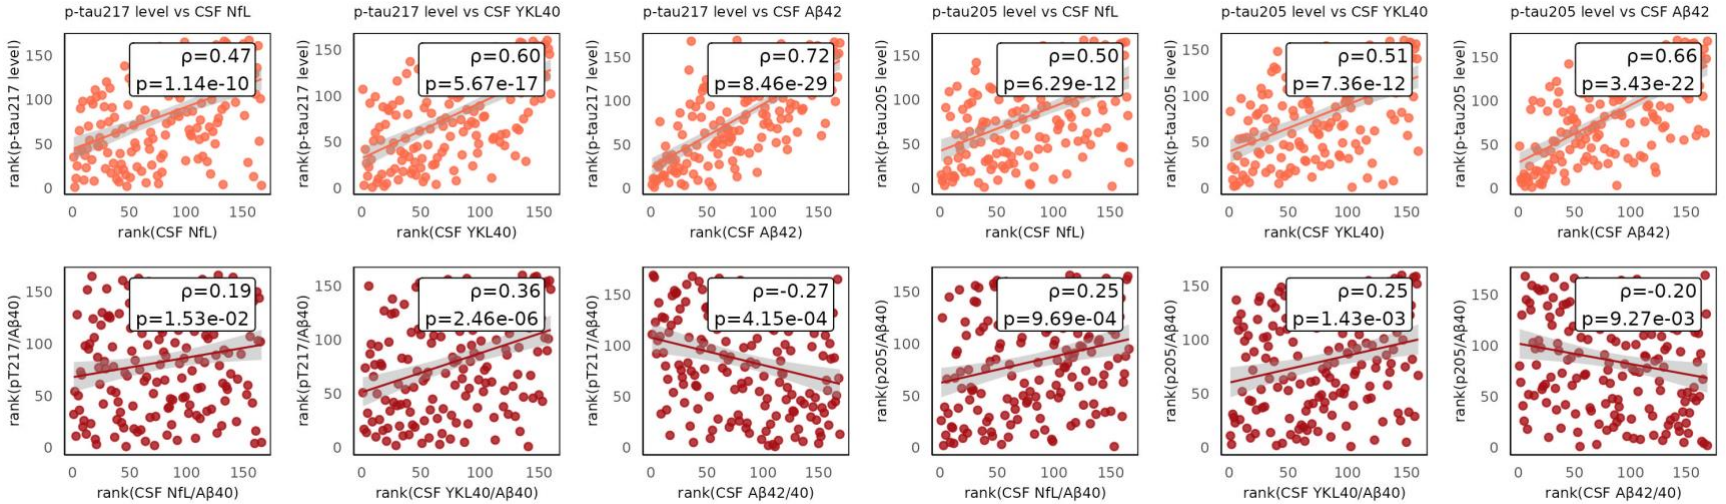

D) CSF p-tau205

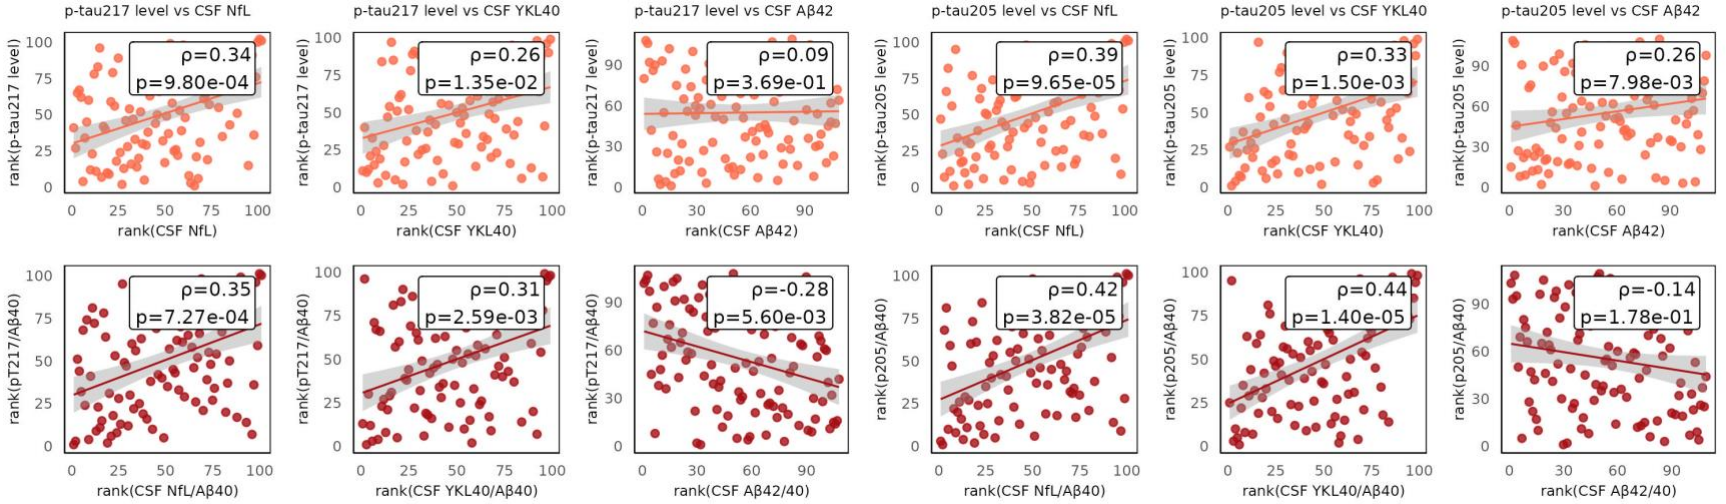

Supplementary Fig. 2. Fluid biomarker correlations by disease stage: raw and normalization to Aβ40.

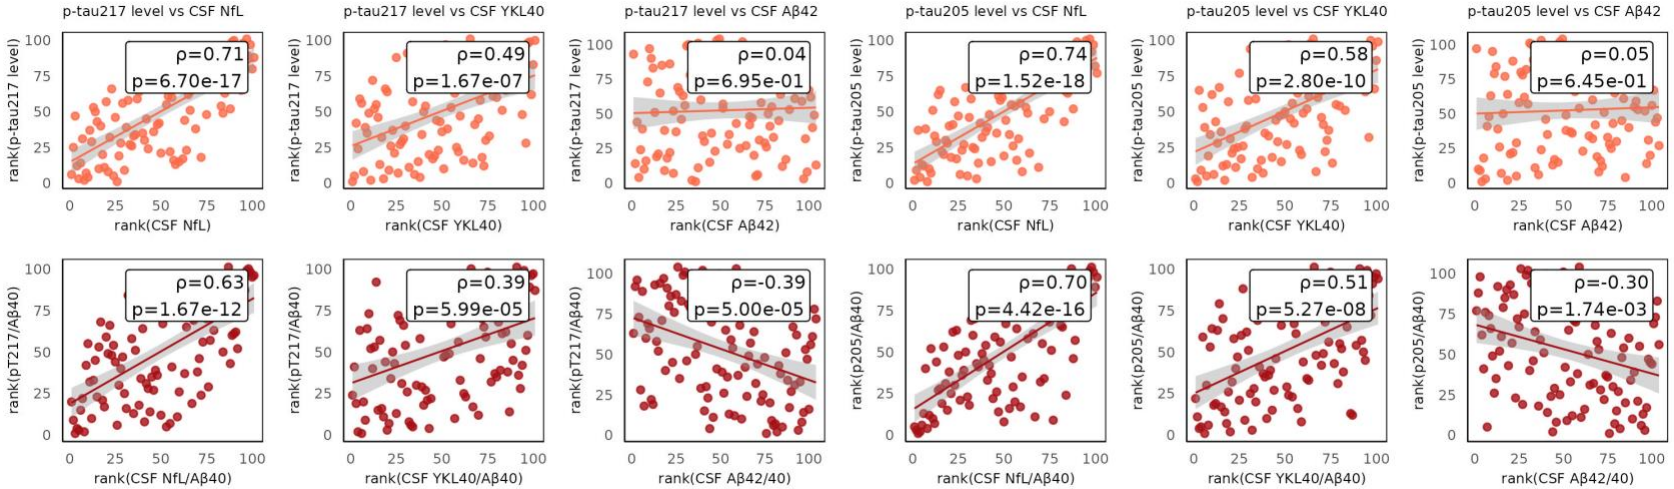

A) NC

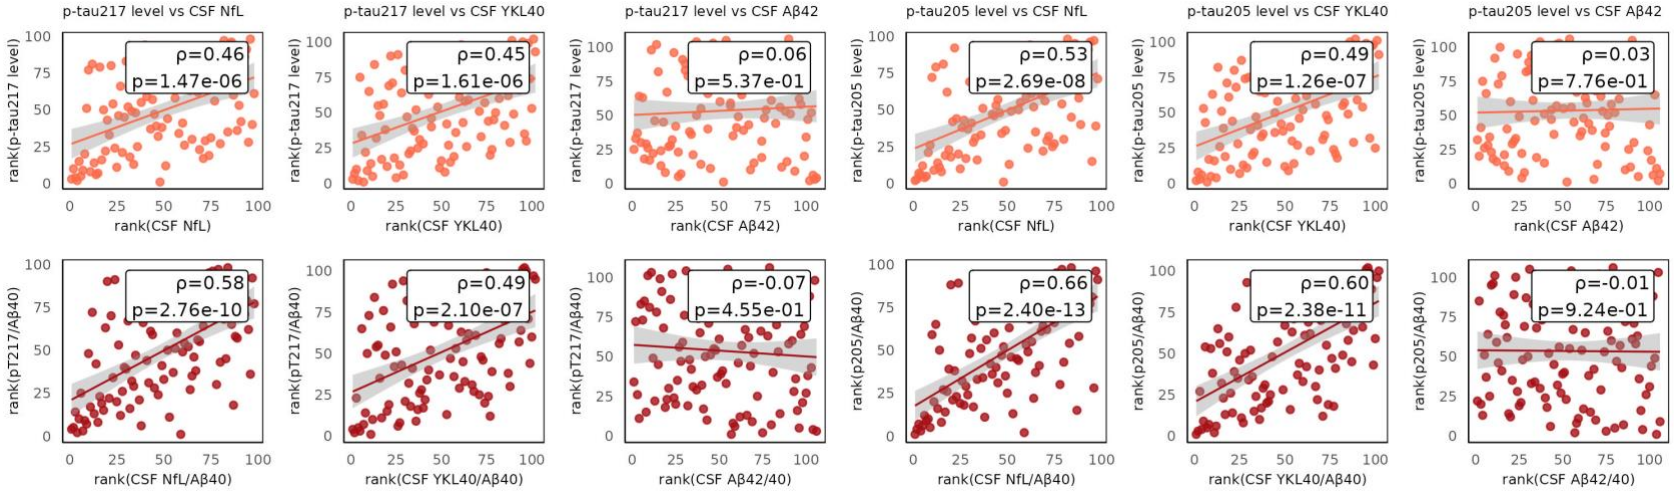

B) Aβ- MC

C) Aβ+ aMC

B) Aβ+ sMC

Shown are Spearman correlation plots for selected biomarker pairs: p-tau217 and p-tau205 versus NfL, YKL-40, and Aβ42, displayed for raw levels (top row) and Aβ40-normalized levels (bottom row). Groups are defined as NC, amyloid-negative non-carriers; Aβ- MC, amyloid-negative mutation carriers; Aβ+ aMC, amyloid-positive asymptomatic mutation carriers with CDR = 0; and Aβ+ sMC, amyloid-positive symptomatic mutation carriers with CDR > 0.
